

Project Name	4-20mA transducer test kit
Summary	This test kit is made for educational purpose in order to get better insight of instrumentation op-amp logic concept and 4-20mA measuring process. It is built with Rail-to Rail Op-Amp and XTR116 for 4-20mA output and compatible with transducer for pressure measurement.
Device	XTR116 MCP6021
Picture	
Feature	<ul style="list-style-type: none"> ● Educational purpose 4-20mA transmitter Transducer test kit ● Easy to assembly by hand-soldering ● Using Rail-to-Rail op-amp and precision IC ● Adjustable for 4-20mA output ● double layer PCB
